ASSOCIATION OF OFFICIAL SEED CERTIFYING AGENCIES

April 2021

The Association of Official Seed Certifying Agencies (AOSCA), Small Grain Variety Review Board (SGVRB), reviewed the following varieties on April 8, 2021. The Board recommended the inclusion of these varieties for certification. Seed of these varieties may be certified, providing production meets all standards of the Seed Certifying Agency of the jurisdiction in which the seed is grown.

All variety information, including descriptions, claims, and research data to support any claim, was supplied to the Small Grain Variety Review Board by the applicants. The Small Grain Variety Review Board makes judgments regarding recommendation of varieties for inclusion into certification based on the data supplied. Beyond that, the Small Grain Variety Review Board takes no position on the accuracy or truthfulness of any description or claim made by the applicants.

## TA19LW009 TA19LW009 (Exp)

1. TA19LW009 is a male-sterile hard red winter wheat A-Line developed by BASF for use in the production of commercial hybrid seed.
2. TA19LW009 was selected for its adaptation to the hard red winter wheat region of the US and for its expression of yield heterosis when hybridized to the appropriate R-Line male. It expresses acceptable milling and excellent baking quality for the hard red winter wheat class. TA19LW009 was developed using a backcrossing process. The initial cross with the recurrent male parent was made to a regionally adapted hard red winter wheat breeding line with male-sterile cytoplasm. Additional generations were produced by backcrossing the recurrent male parent with the male-sterile progeny produced in the prior generation.
3. TA19LW009 was selected for the purpose of expressing maximum heterosis for yield and other agronomic traits when combined with the appropriate R-Line male.
4. No claims for the line regarding its disease/pest resistance are made at this time.
5. Identifying characteristics -

Certified seed will be grown from Foundation seed by designated BASF associates utilizing appropriately isolated A and B-Line field production blocks to maintain genetic integrity and purity, and seedlots will be separately maintained to prevent commingling of B-Line with A-Line seed after harvest and during seed processing. No royalty fees or licensing agreements are anticipated.
7. Certified seed of TA19LW009 will likely be available for planting in fall 2022.
8. Application for PVP is anticipated with the option that TA19LW009 can be sold by variety name only as a class of Certified seed.
